Test Report issued under the responsibility of:

CNAS L6791Page 1 of 24

# TEST REPORT IEC 62109-2

# Safety of Power Converter for use in Photovoltaic Power Systems Part 2: Particular requirements for inverters

Report Number. ..... BL-DG20C0913-B01 attachment 1

**Date of issue.....:** Mar. 17, 2021

Total number of pages ......24

Address of Testing Laboratory Room 104, 204, 205, Building 1, No. 6, Industrial South Road,

preparing the Report ......: Songshan Lake District, Dongguan, Guangdong, China

Applicant's name .....: NingBo Deye Inverter Technology Co.,Ltd.

Test specification:

Standard.....: IEC 62109-2:2011

Test procedure .....: Commissioned test

Non-standard test method.....: N/A

Test item description....:: PV Solar Grid Tie Inverter

Trade Mark...... Deye

Manufacturer .....: NingBo Deye Inverter Technology Co.,Ltd.

Model/Type reference.....: SUN-60K-G03, SUN-50K-G03, SUN-40K-G03, SUN-35K-G03,

SUN-33K-G03, SUN-30K-G03, SUN-25K-G03, SUN-20K-G03

Ratings.....: See copy of marking label and model list.

Testing Laboratory .....: Shenzhen BALUN Technology Co., Ltd

Testing location/ address ...... Room 104, 204, 205, Building 1, No. 6, Industrial South Road,

Songshan Lake District, Dongguan, Guangdong, China

Tested by (name, function,

signature).....:

Colin Chen /Engineer

Approved by (name, function,

signature) : Simon Qi /Chief Engineer

Cotin-Unen

#### General disclaimer:

The test results presented in this report relate only to the object tested.

This report shall not be reproduced, except in full, without the written approval of the Issuing Testing Laboratory. The authenticity of this Test Report and its contents can be verified by contacting the Testing Laboratory, responsible for this Test Report.

Report No.: BL-DG20C0913-B01 attachment 1

#### List of Attachments (including a total number of pages in each attachment):

See report BL-DG20C0913-B01

#### Summary of testing:

## Tests performed (name of test and test clause):

- 4.4.4.15.1 Fault-tolerance of residual current monitoring
- 4.4.4.15.2 Fault-tolerance of automatic disconnecting means
- 4.4.4.17 Cooling system failure Blanketing test
- 4.8.2 Array insulation resistance detection for inverters for ungrounded and functionally grounded arrays
- 4.8.3 Array residual current detection
- 4.8.3.5 Protection by residual current monitoring

#### Remark:

- Other testing conditions considered in this test report, see General product information of the report BL-DG20C0913-B01 for details.

#### **Testing location:**

All tests performed at Testing Laboratory address listed on page 1.

### Summary of compliance with National Differences (List of countries addressed):

List of countries addressed: See report See report BL-DG20C0913-B01.

#### Copy of marking plate:

The artwork below may be only a draft.

Product Name	PV Solar Grid Tie Inverter
Model	SUN-20K-G03
Max. DC Input Power	26kW
Max. DC Input Voltage	1000Vdc
MPPT Voltage Range	200-800Vdc
Max.DC Input Current	2×25Adc
Max. short circuit input	current 2×40Adc
Rated AC Grid Voltage	3L/N/PE 400V
Rated AC Grid Frequenc	y 50/60Hz
Rated AC Output Power	20kW
Max. Active Power	22kW
Max. Apparent Output i	Power 22kVA
Max. AC Output Current	31.9Aac
Power Factor	-0.8~+0.8
Operating Temperature	Range -25°C∼+65°C
Ingress Protection	IP65
Protection Level	Class I

Standard

IEC61727, 62116, 60068, 61683; IEC/EN62109-1/2, EN50549, IEC61000-6-2, 61000-6-4.

NINGBO DEYE INVERTER TECHNOLOGY CO.,LTD. Add: No.26-30, South Yongjiang Road, Beilun, 315806, Ningbo, China.

#### **Safety Warning**

The AC and DC circuits must be disconnected separately, and the maintenance personnel must wait for 5 minutes before they are completely powered off before they can start

It is strictly forbidden for users to open the casing.Professional maintenance is required for internal maintenance of the inverter.

Surface high temperature Please do not touch the inverter case.

The DC input terminals of the inverter must not be grounded.

Please read the instructions carefully before use.

# **Deye**

Product Name PV Solar	Grid Tie Inverter
Model	SUN-25K-G03
Max. DC Input Power	32.5kW
Max. DC Input Voltage	1000Vdc
MPPT Voltage Range	200-800Vdc
Max.DC Input Current	2×30Adc
Max. short circuit input current	2×48Adc
Rated AC Grid Voltage	3L/N/PE 400V
Rated AC Grid Frequency	50/60Hz
Rated AC Output Power	25kW
Max. Active Power	27.5kW
Max. Apparent Output Power	27.5kVA
Max. AC Output Current	39.9Aac
Power Factor	-0.8~+0.8
Operating Temperature Range	-25°C∼+65°C
Ingress Protection	IP65
Protection Level	Class I

IEC61727, 62116, 60068, 61683; Standard IEC/EN62109-1/2, EN50549, IEC61000-6-2, 61000-6-4.

NINGBO DEYE INVERTER TECHNOLOGY CO.,LTD. Add: No.26-30, South Yongjiang Road, Beilun, 315806, Ningbo, China.

#### **Safety Warning**

The AC and DC circuits must be disconnected separately, and the maintenance personnel must wait for 5 minutes before they are completely powered off before they can start

It is strictly forbidden for users to open the casing.Professional maintenance is required for internal maintenance of the inverter.

Surface high temperature , Please do not touch the inverter case. The DC input terminals of the inverter

must not be grounded. Please read the instructions carefully

#### Note:

- 1. The above markings are the minimum requirements required by the safety standard. For the final production samples, the additional markings which do not give rise to misunderstanding may be added.
- Label is attached on the side surface of enclosure and visible after installation.

Test item particulars:	
Equipment mobility::	☐ movable ☐ hand-held ☐ stationary ☐ fixed ☐ transportable ☐ for building-in
Connection to the mains:	☐ pluggable equipment ☐ direct plug-in ☐ permanent connection ☐ for building-in
Enviromental category::	□ outdoor    □ indoor    □ indoor    □ indoor    □ conditional
Over voltage category Mains:	
Over voltage category PV::	
Mains supply tolerance (%):	According to specified supply range
Tested for power systems:	TN
IT testing, phase-phase voltage (V):	N/A
Class of equipment:	□ Class II □ Class III □ Class III □ Not classified
Mass of equipment (kg):	See report BL-DG20C0913-B01
Pollution degree:	PD3(Inside PD2)
IP protection class:	IP65
:	
Possible test case verdicts:	,
- test case does not apply to the test object:	N/A
- test object does meet the requirement:	P (Pass)
- test object does not meet the requirement:	F (Fail)
Testing:	
Date of receipt of test item:	See report BL-DG20C0913-B01
Date (s) of performance of tests:	See report BL-DG20C0913-B01
General remarks:	nonded to the general
"(See Enclosure #)" refers to additional information apple "(See appended table)" refers to a table appended to the The tests results presented in this report relate only to This report shall not be reproduced except in full without List of test equipment must be kept on file and available Additional test data and/or information provided in the Throughout this report a comma / point is us	e report. the object tested. ut the written approval of the testing laboratory. le for review. attachments to this report.
Manufacturer's Declaration per sub-clause 4.2.5 of I	ECEE 02:
The application for obtaining a CB Test Certificate includes more than one factory location and a declaration from the Manufacturer stating that the sample(s) submitted for evaluation is (are) representative of the products from each factory has been provided	☐ Yes ☐ Not applicable
When differences exist; they shall be identified in th	ne General product information section.

Report No.: BL-DG20C0913-B01 attachment 1

Name and address of factory (ies).....

See report BL-DG20C0913-B01.

### General product information:

See report BL-DG20C0913-B01.

Throughout the test report following abbreviations may be used:

•	cl	clearance	•	int	internal distance
•	dcr	creepage distance	•	O-C	open-circuit
•	dti	distance through insulation	•	o-l	overload
	PCE	Power Conversion Equipment	•	S-C	short-circuit

BI basic insulation
 DI double insulation
 SI supplementary insulation
 RI reinforced insulation

		IEC 62109-2		
Clause	Requirement + Test		Result - Remark	Verdict

4	GENERAL TESTING REQUIREMENTS		-
4.4.4	Single fault conditions to be applied		
4.4.4.15	Fault-tolerance of protection for grid-interactive inverters	The PCE could detect and indicate the fault condition and disconnect from or not connect to the grid in case of single fault condition. Refer to the appended table 4.4 of IEC/EN 62109-1 test report BL-DG20C0913-B01.	-
4.4.4.15.1	Fault-tolerance of residual current monitoring according to 4.8.3.5: the residual current monitoring system operates properly	See appended table 4.4.4.15.1	Р
	a) The inverter ceases to operate		Р
	- Indicates a fault in accordance with §13.9		Р
	- Disconnect from the mains		Р
	<ul> <li>not re-connect after any sequence of removing and reconnecting PV power</li> </ul>		Р
	<ul> <li>not re-connect after any sequence of removing and reconnecting AC power</li> </ul>		Р
	<ul> <li>not re-connect after any sequence of removing and reconnecting both PV and AC power</li> </ul>		Р
	b) The inverter continues to operate		N/A
	<ul> <li>the residual current monitoring system operates properly under single fault condition</li> </ul>		N/A
	- Indicates a fault in accordance with §13.9		N/A
	c) The inverter continues to operate regardless of loss of residual current monitoring functionality		N/A
	<ul> <li>not re-connect after any sequence of removing and reconnecting PV power</li> </ul>		N/A
	<ul> <li>not re-connect after any sequence of removing and reconnecting AC power</li> </ul>		N/A
	<ul> <li>not re-connect after any sequence of removing and reconnecting both PV and AC power</li> </ul>		N/A
	- Indicates a fault in accordance with §13.9		N/A
4.4.4.15.2	Fault-tolerance of automatic disconnecting means		-
4.4.4.15.2 .1	The means provided for automatic disconnection of a grid-interactive inverter from the mains shall:		-
	disconnect all grounded current-carrying conductors from the mains	No grounded current-carrying conductors	N/A
	disconnect all ungrounded current-carrying conductors from the mains		Р
	be such that with a single fault applied to the disconnection means or to any other location in the inverter, at least basic insulation or simple separation is maintained between the PV array and the mains when the disconnecting means is intended to be in the open state.	See appended table 4.4.4.15.2 Fault-tolerance of automatic disconnecting	Р
4.4.4.15.2 .2	Design of insulation or separation complies with requirements of 7.3.7 of Part 1: report here Part 1 comment and verdict.	The automatic disconnection means is automatically checked before the inverter start operation	Р
4.4.4.15.2	For non-isolated inverter, automatic checking of the	See appended test table	Р

190 V	210V	32kohm	33.3kohm	the unit cannot start operation until the insulation resistance has recovered
190 V	210V	35kohm	33.3kohm	the unit can start operation until the insulation resistance has recovered

#### Note:

For isolated inverters, shall indicate a fault in accordance with 13.9 (operation is allowed); the fault indication shall be maintained until the array insulation resistance has recovered to a value higher than the limit above

For non-isolated inverters, or inverters with isolation not complying with the leakage current limits in the minimum inverter isolation requirements in Table 30, shall indicate a fault in accordance with 13.9, and shall not connect to the mains; the inverter may continue to make the measurement, may stop indicating a fault and may connect to the mains if the array insulation resistance has recovered to a value higher than the limit above.

It is not required to test all PV input terminals if analysis of the design indicates that one or more terminals can be expected to have the same result, for example where multiple PV string inputs are in parallel.

298.9	600	150.0	300
298.9	600	190.0	300

#### Note:

- maximum 300mA for inverters with continuous output power rating ≤30 kVA;
- maximum 10mA per kVA of rated continuous output power for inverters with continuous output power rating > 30 kVA.

This test shall be repeated 5 times, and for all 5 tests the time to disconnect shall not exceed 0,3s. The test is repeated for each PV input terminal. It is not required to test all PV input terminals if analysis of the design indicates that one or more terminals can be expected to have the same result, for example where multiple PV string inputs are in parallel.
